TravelSaathi Privacy Policy

Last updated: Oct 4, 2026

Introduction

Thank you for using TravelShaathi!

TravelSaathi is a trip-planning app run by Aryan Gupta who is currently an IT Engineer. This policy explains what the app handles and who else sees it.

In short:

- You do not need an account, and the app shows no ads.
- Trips you plan are saved on your own phone.
- What you type is sent to an AI service so it can plan your trip.
- We do not ask for your location, contacts, camera, microphone or payment details.

By using TravelSaathi you agree to this policy. If you do not agree, please do not use the app.

Information we handle

TravelSaathi handles the following information so it can plan trips for you.

- **What you type.** Messages in the search bar, questions in the Explore screen, and any home city you enter.
- **Trip details.** The destination, number of days, budget, expenses you log, and trips you choose to save.
- **Technical information.** Like any app that uses the internet, it reveals your IP address and basic network details to the servers that answer each request.
- If you choose to enter your first name, it is saved only on your phone to greet you, and it is never sent to us or to any service.

We do not collect your name, email address, phone number, location, contacts, photos or payment details. The app has no sign-in. We do not use advertising or analytics tools.

If you installed TravelSaathi from Google Play, Google may collect crash and performance data under its own policies.

How we use information

We use your information only to run the app.

- To plan itineraries and suggest hotels, restaurants and activities.
- To greet you by your first name, if you chose to enter it.
- To look up places, photos and weather forecasts for your destination.
- To remember your trips on your phone between visits.

- To protect the service from misuse, for example by checking that requests come from the app.

We do not sell your information. We do not use it for advertising or to build profiles about you.

Third-party services

TravelSaathi sends data to the services below. Each one handles it under its own privacy policy, which we encourage you to read.

Service	What it receives	Why
Cloudflare (our relay server)	Your message, basic trip details, IP address and request details	Passes requests to the AI service and keeps the AI service key off your phone
Groq (AI language model)	Your message and basic trip details	Writes itineraries, suggestions and answers
Wikipedia and Wikimedia	Destination names and image requests	Confirms places and shows destination photos
Open-Meteo	Destination name	Provides weather forecasts
Picsum Photos	Image request and a place identifier	Shows a placeholder photo when no Wikipedia photo is available

Some buttons open other apps or websites, such as Google Search, Google Maps, Google Flights, Booking.com, MakeMyTrip, IRCTC, RedBus, AbhiBus and Zomato. Once you leave TravelSaathi, that site's own policy applies. We do not see what you do there, and bookings are made on those sites, not in our app.

Storage, retention and deletion

Your trips are stored on your phone and stay there until you remove them. We do not keep a database of what you type, and our relay server may keep short-term technical logs, such as request times and error codes, to run and protect the service.

The services in the table above may keep data for their own periods under their own policies.

You can delete your data at any time:

- Remove a saved trip from the My Trips screen.
- Clear the app's storage in your phone's Settings, under Apps, then TravelSaathi.
- Your name is stored only on your phone. Clearing the app's storage or uninstalling the app removes it.
- Uninstall the app.

Security

The app talks to our relay server over encrypted connections (HTTPS), and the AI service key is kept on the server, not in the app. We never ask for passwords or payment details. No method of transmission or storage is completely secure, so we cannot guarantee absolute security.

Children's privacy

TravelSaathi is not intended for children under 13. We do not knowingly collect personal information from children. If you believe a child has sent personal information through the app, contact us and we will help you remove it.

Your choices and rights

You control what you type. If you do not want something sent to the AI service, do not type it, and avoid including personal details in your messages.

Entering your name is optional. You can skip it, and the app works the same way.

Because there is no account, we hold no profile about you, and your saved trips can be deleted on your phone as described above. Depending on where you live, for example under India's Digital Personal Data Protection Act, 2023 or the EU's GDPR, you may also have rights to access, correct or erase personal data. To ask about those rights, contact us using the details below.

International data transfers

The services listed above run servers in several countries, so your information may be processed outside the country where you live, including in the United States and Europe. By using the app you accept this transfer.

Changes to this policy

We may update this policy when the app changes. The date at the top shows the latest version. If a change is significant, we will say so in the app or on the Google Play listing.
